13. ABSTRACT (Maximum 200 words) U.S. Army risk management is a process used to minimize loss of life, injuries, and property damage. One step in the risk management process is risk assessment. Currently, risk assessment assigns a probability value for an identified hazard, based on a subjective evaluation. The need exists to assign objective probability values when assessing the risks imposed by aircraft component and part failures. This research extracted UH-60 and UH-1 helicopter part failure data for a 10-year period from the Army Safety Management Information System (ASMIS) data base. Data inconsistencies were corrected, the corrected data were organized into groups, and failure rates were calculated. The results established that component and part failure analyses can be successfully conducted using available data bases and that these data can be used to quantify hazard probabilities for failed aircraft components and parts. Volume I of this report describes the methodology used to obtain the failure rates, presents the results of the analyses, discusses potential uses for the data, and provides recommendations for further research. Volume II provides a table of part failure rates and a list of records for the UH-60 (see Appendix A) and for the UH-1 (see Appendix B).

AVIATION SYSTEM SAFETY RISK MANAGEMENT TOOL ANALYSIS
VOLUME II: APPENDICES

INTRODUCTION

This is the second volume of a two-volume report that describes the collection and analysis of aircraft component and part failure data for the UH-60 and UH-1 helicopters.

Volume I presents the background of the project, describes the methodology used to obtain and analyze the data, presents the results of the analysis, and recommends potential areas for further research.

Volume II contains Appendices A and B. Appendix A contains tables that list the failed UH-60 parts sorted by component group. Appendix B contains tables that list the failed UH-1 parts sorted by component group. For each failed part name, the tables display the number of failures and the failure rate for each fiscal year from 1981 to 1990 and for the 10-year period. Following each component group table is a list of all records within that group. The list displays the failed part name, part number, fiscal year of occurrence, Army mishap classification, and accident case number.

A P P E N D I X A

UH-60 Component Analysis Table and Accident Record List

Component and part failure data were analyzed for the Army UH-60 helicopter fleet for fiscal years (FYs) 1981 - 1990. The data were organized into 14 major component groups with the failed parts listed alphabetically within each group. The tables in Appendix A display the number of times each part failed for each FY in the top line of each row and the corresponding failure rate per 100,000 flight hours on the second line. Also displayed for each part is the total number of failures and the failure rate for the 10-year period. Additionally, each component group table is followed by a list of records within the group. This list displays the failed part name, part number, FY of occurrence, Army mishap classification (AMC categories A-E), and accident case number. An X in the box in the far right column of the list indicates the record is a duplicate and was not used to calculate rates. Part names in both the tables and the lists are truncated to 10 or fewer characters because of data base space limitations. Complete part nomenclature can be obtained by referencing the part number in the appropriate aircraft parts manual.

A P P E N D I X B

UH-1 Component Analysis Table and Accident Record List

Component and part failure data were analyzed for the Army UH-1 helicopter fleet for fiscal years (FYs) 1981 - 1990. The data was organized into 15 major component groups with the failed parts listed alphabetically within each group. The tables in Appendix B display the number of times each part failed for each FY on the top line of each row and the corresponding failure rate per 100,000 flight hours on the second line. Also displayed for each part is the total number of failures and the failure rate for the 10-year period. Additionally, each component group table is followed by a list of records within the group. This list displays the failed part name, part number, FY of occurrence, Army mishap classification (AMC categories A-E), and accident case number. An X in the box in the far right column of the list indicates the record is a duplicate and was not used to calculate rates. Part names in both the tables and the lists are truncated to 10 or fewer characters because of data base space limitations. Complete part nomenclature can be obtained by referencing the part number in the appropriate aircraft parts manual.
